

Start your Engines!

Daniel carefully slides a 12,000 HP Detroit Diesel engine into the yard.

Oilfield Division is off to the races.

As the doors opened at the Calgary facility the Propell team was met by their first service retrofit - a Coiled Tubing rig that JUST fit under the shop doors. And back in Rosedale, TYCROP got to share in the excitement with the arrival of huge engines and pumps for the first FRAC pumper orders for Trican.

"It's very exciting to see it all coming together" says Gary Teichrob "for the last couple of years we've all worked very hard so that we could become a significant manufacturer in the oilfield equipment business and we're off to a great start!"

The Calgary facility will service and repair oilfield equipment as well as do final prep on the new line of products that start their process at TYCROP's main production facility.

Jason Moorhouse, Propell Service Manager remarked on the support he and the rest of the Calgary staff have received from the team in Rosedale in getting the new facility set up "I cant help but be blown away with how fast and relatively painless this has been."
